Projects

1. Student Management System for Jayasekara Management Centre (JMC), Kaduwela**Nov2013**

Developed a desktop applications using C# that help the staff to work in the students' activities and staff activities.

1. Enter new students

2. Enter new staff members
3. Get the attendance of students
4. Get the attendance of staff
5. Salary calculation of the staff
6. Calculation of marks of the students (contribution for the project given by myself)
7. Issue reports for the students
8. Hall allocation
9. Management of the time tables

2. Application for the bus passengers

March 2014

Developed a desktop application using C# that helps bus passengers to find out routes and important places as well as the bus fare according to the route they select and according to the type of bus they select. Later it expanded for the use of people who travel by their own vehicles and taxis.

This system,

1. Allows user to select the current place they are in and the destination they need to go.
2. Shows all the paths he can reach the destination.
3. Shows the current place and the destination and all the paths a person can travel by bus as well as shortcuts.
4. When the user takes the mouse pointer onto a route, it gives all the details like bus fare, distance, average time bus types etc.
5. Shows the important places the passenger meets on the way he travels when the mouse pointer is taken along the route. This is especially concerned for the people who travel by their own vehicles.
6. As an alternative option if the user selects taxi, he can take the service according to his/her preference of taxis.
7. If the user needs to check a place that facility also available in that application.

3. Alternative tool kit for the late bloomed children – 4th year research

2015

Late bloomed children are the ones who are late in talking. So we will introduce an alternative tool kit focusing the object identification, Optical character recognition, template matching and voice recognition. This is building up using image processing and speech engine basically in C# and MsSQL. Contribution for the research is by building up a function to identify whether the child has identified the given object by the system clearly or not through Natural Language Processing.
